PROFESSIONAL EXPERIENCE

L3Harris Technologies, *Software Engineer III*

Software Engineer III Jan 2020 – Present

- Designed and developed 40+ REST API endpoints for a geospatial data access layer, implementing SQL queries and custom Java Teiid functions to join and transform data across 35 database tables (1M+ records each), with JSON serialization that enabled efficient downstream consumption of large-scale datasets
- Improved SQL optimization across 10+ endpoints resulting in a 90% performance improvement in runtime
- Developed an automated testing framework for the data access layer to validate API outputs against customer specifications, improving system stability and saving $200K in development costs through reduced manual verification
- Integrated customer algorithms and automated workflows for our geospatial data processing tool, developing custom Groovy/Java ingestion scripts and SQL queries to support image processing and analytics

Deputy Technical Lead Mar 2025 – Present

- Led sprint planning, backlog refinement, and task prioritization for a team of 11 engineers across multiple customer contracts, providing technical guidance to resolve development blockers and align engineering work with program objectives, ensuring consistent delivery of sprint commitments
- Mentored incoming college graduate hires by guiding them through team workflows, tools, and development practices, accelerating onboarding and enabling faster contribution to active projects

Deputy Product Owner Sep 2025 – Present

- Overseeing communications between the development team and customers, resolving technical questions and development blockers to maintain sprint progress to enable timely delivery of planned work
- Represented the voice of the customer during sprint planning and backlog refinement ensuring prioritized features aligned with operational needs

Diverse Computing, *Jr. Systems Analyst,* Tallahassee, FL May 2019 – Dec 2019

- Built a CJIS compliance tracking web application using Angular, Spring, and Java, implementing full-stack enhancements and integrating a MySQL database.

SKILLS

- *Languages*: Java, Python, C, C++, C#, Groovy, and SQL
- *Tools/Environments*: Unix/Linux, Docker, Git, PostgreSQL, Oracle, Atlassian, Jenkins, and Virtual Box

EDUCATION

- *Florida State University (FSU)*, Tallahassee, FL December 2019
- Bachelor of Science in *Computer Science*
